

African-American Research at the New Jersey State Archives

African-Americans have a long history in New Jersey. African-Americans were in New Jersey as slaves starting in the 17th Century.

In the colonial era and the early history of the state, a majority of the African-Americans living in New Jersey were enslaved. According to the 1790 Census, 79% of the African-Americans in New Jersey were slaves. Slaves appear in wills and inventories of owners throughout this period.

In 1804, a law was passed allowing for the abolition of slavery. It was a gradual process. Children of slaves had their births recorded by each of the County Clerks. Once they reached the specified age they received their freedom. By the 1860 Census there were only 18 slaves in New Jersey.

New Jersey was a destination for many during the Great Migration of African-Americans from the South during the late 19th and early 20th Centuries. By the 1930 Census, there are many African-Americans not born in New Jersey. By 2010, African-Americans made up over 14.8% of New Jersey's population.

Undertaking African-American research in New Jersey is very similar to non-African American family research. Many of the record sets utilized are the same. Family researchers face many of the same challenges as other researchers, such as the non-reporting of events or the misspelling of names.

Undertaking research into an African-American family who lived in New Jersey may take you back to slavery in the early days of New Jersey, to the immigrant experience of migrants from the Caribbean, or draw you to the Southern United States with individuals who moved North as part of the Great Migration in the 20th Century.
